

Fallacies of Evolution

"In the beginning God created the heavens and the earth." [Genesis 1:1](#) This diametrically opposes the theory of evolution, and at best relegates the creation story to a myth or allegory. **If you did not believe the beginning of the Bible, would you believe the rest of it?**

By the **second law of thermodynamics**, in all spontaneous processes total entropy (a measure of disorder) always increases and is irreversible.

Evolution depends on organization (information) arising spontaneously, but this law makes it impossible. In the initial stages, evolution depends on molecules assembling by random chance into useful ones. But the rate of organization is very much slower than the rate of information loss, so actually unlimited time is an *enemy*, not a requirement.¹

Neo-evolutionists have doubts about the theory, because a favorite alternative is *panspermia*, that extra-terrestrials in the distant past seeded the earth with life. But how were they able to evolve from primitive chemicals in distant worlds, if not possible here? Ironically, this is an appeal to *intelligent design*.

²A **primordial soup**, unquestioned for decades, faces numerous scientific difficulties. The Miller-Urey³ experiments in 1952 produced some amino acids, but the earth's early atmosphere would have been fundamentally different from the experiment. There are other objections and only scant progress since.

No viable explanation for the genetic code. Assuming a (very unlikely) primordial soup, the most prominent hypothesis is called *the RNA world*. But RNA could not perform all cellular functions necessary for life.

Random mutations not viable for irreducibly complex structures. Darwin recognized this in his Origin of Species: *"If it could be demonstrated that any complex organ existed, which could not possibly have been formed by numerous, successive, slight modifications, my theory would absolutely break down."*

Natural selection struggles to establish advantageous traits in populations. Unless a trait gives an extremely strong selective advantage, genetic drift will overwhelm it and prevent adaptations from gaining a **foothold** in a population. There are many redundant cellular sys-

tems which aid in survival, but they are seldom exposed to the sieve of selection.

Missing transitional forms in the fossil record have long-been recognized as a problem for evolutionary theory. In his Origin of Species, Darwin admitted: *"Geology assuredly does not reveal any such finely graduated organic chain [intermediate forms]; and this, perhaps, is the most obvious and gravest objection which can be urged against my theory."* Some 150 years later, only a small fraction are claimed as candidates for Darwin's intermediate forms.

Molecular biology has failed to yield a grand "Tree of Life". When fossils failed to demonstrate that animals evolved from a common ancestor, evolutionary scientists turned to DNA sequence data. Efforts to build a grand "tree of life" using DNA or other biological sequence data have failed, so the history of life cannot properly be represented as a tree.

Convergent evolution challenges Darwinism and destroys the logic behind common ancestry. Molecule-based trees of life conflict sharply with previously established ones, concluding it is

due to convergent evolution,⁴ thus destroying the logic behind common ancestry.

Differences of vertebrate embryos contradict predictions of common ancestry. Biologists have found considerable variability among vertebrate embryos, contradicting what we are told. Development before the phylotypic stage (maximal similarity) is very varied.

Evolutionary explanations of biogeography fail where it is virtually impossible to explain how an ancestral population could have migrated there.

Long history of inaccurate predictions about vestigial organs and junk DNA. As scientists have learned more and more about the workings of biology, important functions and purpose have been discovered for these so-called vestigial structures. Today biologists are extremely wary of talking about vestigial organs at all.

Humans have abilities that offer no apparent survival advantage. Oskar Schindler, the German businessman risked his life “to save more than a thousand Jews from the gas chambers. That’s the opposite of saving his genes. There

are other examples of “radically sacrificial” behavior that “reduces reproductive success” and offers no evolutionary benefit, such as voluntary poverty, celibacy, and martyrdom.

The salvation of your eternal soul is personal between you and God and does not depend on rites, clerics, traditions, good works, or belonging to any church or religion: “*For by grace you have been saved through faith; and that not of yourselves, it is the gift of God; not as a result of works...*” [Eph 2:8-9](#) No matter what kind of person you are or what you have done: “*If we confess our sins, He is faithful and righteous to forgive us our sins and to cleanse us from all unrighteousness.*” [1 John 1:9](#) Pray today to put your faith in Jesus Christ alone: “*For God so loved the world, that He gave His only begotten Son, that whoever believes in Him shall not perish, but have eternal life.*” [John 3:16](#) Then study the Bible to live pleasing to God: “*...if anyone is in Christ, he is a new creature; the old things passed away; behold, new things have come.*” [2 Cor 5:17](#)

Please pray like this with all sincerity: “Dear Lord Jesus, I know I am a sinner,

and I ask for your forgiveness. I believe you died to forgive my sins and rose from the dead. I trust and follow you as my Lord and Savior. Please guide my life and help me to do your will. In the name of my Lord Jesus Christ, Amen.”
